BEGINNER GUIDE

How to Trade Vixale

A beginner-facing execution guide for Day Trading, Swing Trading, and Options. Vixale publishes signals or portfolio instructions; users execute in their own broker platform.

DAY TRADING

Signal -> broker execution -> published target -> Stop Ref monitoring. Stop Ref is a close-based reference when specified, not a simple intrabar touch.

SWING TRADING

Once-daily portfolio update during 10:00-11:00 AM ET. Potential Candidates = watch. Active Portfolio = act. Closed Trades = completed model positions.

OPTIONS

Watch 6:00-8:30 PM ET -> sell the instructed ES straddle for credit -> place the buyback target -> follow later hedge, adjustment, or exit instructions.

PRIME / EDGE

Day Trading Workflow

Use the published signal details. The guide explains execution only and does not reveal strategy-generation logic.

1. Receive the signal

Watch Telegram and/or the Vixale website for the new Prime or Edge signal.

2. Execute in your broker

Enter the published symbol and entry instruction in your own broker platform.

3. Place the target

Use the published profit-taking limit.

4. Monitor Stop Ref

When a Stop Ref is specified, follow the applicable candle-close instruction rather than treating a simple intrabar touch as an automatic broker stop.

Example: BUY 100 AAPL @ $300 • TGT $302 • STOP REF $299

How to Follow Vixale Swing Trading

The public Swing workflow is based on one daily portfolio update. Exact market prices in examples are intentionally omitted.

1. Check after the update

The portfolio is updated once per trading day during 10:00-11:00 AM ET. Review Active Portfolio for additions and removals.

2. Add new Active Portfolio positions

A new symbol appearing in Active Portfolio is the actionable addition. Enter as soon as practical and record your actual broker fill.

3. Manage the +10% target

Calculate 1.10 x your actual entry. The target may execute intraday through a GTC sell limit.

4. Apply the morning -5% stop rule

Calculate 0.95 x actual entry as the stop reference. It is evaluated during the scheduled morning review and is not an automatic intraday stop order.

5. Honor research removal

Removal from Active Portfolio is an independent exit instruction. Close at market as soon as practical instead of waiting for the target or stop.

HOOD = +10% target example • FCX = morning -5% stop example • MU = research-removal example

Options Workflow

The beginner Options workflow is the ES short-straddle credit workflow.

1. Watch 6:00-8:30 PM ET

Monitor the published Options instruction.

2. SELL the instructed ES straddle

Open the specified call + put combination for the published credit.

3. Place BUY TO CLOSE target

Use about 10% below entry credit and round to the nearest 0.25 ES option price increment.

4. Follow updates

Use later hedge, adjustment, or exit instructions when published.

Illustrative example

SELL 1 ES straddle @ 33.00 credit

33.00 x 0.90 = 29.70

Rounded BUY TO CLOSE target = 29.75

ES multiplier = 50

Illustrative profit if filled = (33.00 - 29.75) x 50 = $162.50

QUICK REFERENCE

Daily Routine

Use this page as a compact execution reminder.

DAY TRADING

Signal -> broker -> published target -> Stop Ref monitoring

SWING TRADING

10:00-11:00 AM ET update -> additions/removals -> +10% GTC target -> scheduled morning -5% stop check -> research removal if published

OPTIONS

6:00-8:30 PM ET -> SELL ES straddle for credit -> BUY TO CLOSE about 10% lower -> follow updates

Risk reminder

Examples are educational. Actual fills, spreads, commissions, margin requirements, and execution can differ. Trading involves risk and results are not guaranteed.
